Project Overview

A web application for managing Food Trucks: customers can browse trucks, view menus, add items to cart, and place orders. Truck owners can manage menus and track orders.

This repository covers:

- Milestone 3 (Backend): Database schema, server-side endpoints, business logic, and API responses.
- Milestone 4 (Frontend): Responsive UI pages, client-side logic with jQuery/AJAX, and integration with backend APIs.

Features

I. Customer

- View available trucks (only those accepting orders).
- View a truck's menu and filter items by category.
- Add items to shopping cart (single-truck constraint enforced).
- Edit quantities or remove items from cart.
- Place orders with scheduled pickup time.
- View order history and order details

II. Truck Owner

- View your truck information and order availability.
- Create, view, edit, and delete menu items.
- View all orders for your truck with status filters.
- Update order status: pending, preparing, ready, completed, cancelled.

Technology Stack

- Frontend: HTML (Hogan.js templates), CSS, Bootstrap, jQuery, AJAX
- Backend: Node.js, Express, Knex (Query Builder)
- Database: PostgreSQL
- Tools: Thunderclient / Postman (API testing), pgAdmin (DB management)

Installation & Setup

1. Prerequisites: Install Node.js and npm. Install PostgreSQL and ensure a local instance is running.
2. Clone the repository: `git clone <your-repo-url> && cd <your-project-root>`
3. Create the database: Create a database named FoodTruck. Execute `connectors/scripts.sql` in pgAdmin (or psql).
4. Configure environment: Create a `.env` file (see Environment Variables).
5. Install dependencies: `npm install`
6. Run the backend server: `npm run server`
7. Open the app: Navigate to `http://localhost:3000` in your browser.

Environment Variables

PostgreSQL connection

`DB_CLIENT=pg`

`DB_HOST=localhost`

`DB_PORT=5432`

`DB_USER=your_username`

`DB_PASSWORD=your_password`

`DB_DATABASE=FoodTruck`

Session/Token settings (examples)

`SESSION_SECRET=replace_with_a_secure_random_string`

`TOKEN_EXPIRY_HOURS=24`

Running & Testing

- Create account & Sign in via the Login/Register pages.
- Use Thunderclient (VS Code) or Postman to test endpoints.
- Use Browser DevTools → Network tab to verify AJAX calls.

Tips for Creating Menu Items

- **Name:** Use clear, descriptive names that customers will recognize
- **Category:** Choose the appropriate category to help customers find items
- **Descriptions:** Highlight key ingredients and what makes the item special
- **Prices:** Set competitive prices that reflect the value of your items
